Document Number: KXTDA100007

KX-TDA100/200 vers 2.0 Installer Alert!!

The new PC Programming Utility for the latest revision of KX-TDA100/200 is an upgraded version of the 1.1 PC Programming Utility.

Be advised of the following procedure when installing the new PC Program Utility for version 2.0.

For PC's and Laptops currently using the TDA PC Programming Utility 1.1

If the 1.1 PC Programming Utility is currently installed on your PC or laptop, DO NOT REMOVE or UN-INSTALL that program. When installing the new PC Programming Utility for version 2.0 you will be selecting the MODIFY option under the Windows Install screen. The 2.0 Utility uses certain files that reside within the 1.1 program.

When installing the program there will also be an option asking for which program areas to install. When requested, you must select all three areas, including USB DRIVER, MAIN PROGRAM (200) and HELP.

For PC's and Laptops that do not have any TDA PC Programs installed.

If your PC or Laptop does not have a TDA Program installed, you must first install the 1.1 PC Programming Utility. The 1.1 version can be downloaded from the B2B Dealer only site.

After installing the 1.1 PC Programming Utility, you will then follow the procedure written above.
