INTRODUCTORY

THE Gray Telephone Pay Station Company brought out the first device for the collection of telephone charges without the use of an attendant in the year of 1888. Previous to that time nothing in form of a practical pay station had ever been produced.

The fact that the Gray was the pioneer of automatic pay stations and the first to be placed upon the market, at once won for it an enviable reputation which it still continues to hold. We have not, however, been content to rest here but have devoted our energies and experience gained in over a quarter of a century's study in the development and manufacture of telephone toll equipment to the betterment of our product.

The tremendous number of our stations in actual use is the best indication of how well we have kept pace with the demand of the times.

The policy of the company is to anticipate the requirements in telephone toll apparatus and to produce a practical mechanism when the real need is manifest. The success of the company marks the success of this policy.

ANNOUNCEMENT

WE take pleasure in calling to your attention the many pieces of apparatus of original and artistic design shown in this catalog. The published indorsements shown from telephone companies operating throughout the United States is the best proof we can furnish that Gray Pay Stations do give entire satisfaction under every and all conditions.

To those of our customers who have never visited our factory we have attempted to convey by the several shop views shown in this book the equipment we have for the accurate and rapid production of the line of goods we make and by these illustrations prove that careful manufacture is used employing jigs, dies, tools and special fixtures in order to insure interchangeability of parts and fidelity to design; also that each instrument is carefully tested as well as comparisons taken following each manufacturing operation.

The prestige attached to the Gray Pay Station is well known; it is the logical result of a continual and strict adherence to the principles of equity and exact justice upon which this business was established twenty-five years ago.

GRAY TELEPHONE PAY STATIONS

With Gray Pay Stations: You Simply Drop in the Coin

Quick service.

With Gray Pay Stations the user is only required to drop the coin in the proper slot when told by the operator.

No levers to push or pull; no buttons to operate.

Traffic managers claim in case of the use of lever or push slide types of stations, too much of the operator's time is taken up in instructing subscribers in the use of such machines. For this reason, Gray Pay Stations are made entirely automatic in action.

**The simplicity of Gray Pay Stations affords
the lowest possible cost of maintenance**

MULTI-COIN PREPAY STATION

SUBJECT Catalogue of Gray Pay Station Apparatus.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY.

15 DEY STREET.

JOHN J. CARTY,
CHIEF ENGINEER.

NEW YORK. January 10, 1912.

December 29--41894-131C-131E.

Mr. Charles Soby, Secretary and Treasurer,
The Gray Telephone Pay Station Company,
Hartford, Connecticut.

Dear Sir:-

I was interested to learn from your letter of December 29th that you are about to issue a new catalogue of Gray pay station apparatus and I shall be very glad to receive copies of this publication. The only multi-coin box that has been definitely approved by this Department is the new prepayment No. 50-A type to which you refer specifically, and a letter standardizing this piece of apparatus was sent to the associate companies a few days ago.

Under these conditions I see no objection to your stating in your catalogue, if you so desire, that this particular coin box was designed to meet the requirements of the American Telephone & Telegraph Company and that it has been standardized by them for use where a prepayment multi-coin box should be employed.

Yours truly,

KWW-EMW.

J. J. Carty Chief Engineer.

STANDARDIZED

THE pay station illustrated and described in the following pages was designed to meet the requirements of the American Telephone & Telegraph Company, and is the only prepay multi-coin box that has ever been definitely approved by said company. A letter standardizing these stations has been sent out by the above to its associate companies, recommending its use in places where a prepayment multi-coin box should be employed.

GRAY TELEPHONE PAY STATIONS

GRAY TELEPHONE PAY STATIONS

Prepayment Multi-Coin Collectors

TO produce a Pay Station that would provide for the prepayment of both local and long distance telephone calls has been a problem long given serious and intelligent thought, and only after years of patient study and experiment by inventors of long Pay Station experience and its development by the ablest Pay Station builders in the world, designed with a thorough knowledge of what not to do as well as what to do has enabled the contribution to the telephone world this most important mechanical achievement in the Pay Station art.

That a multi-coin prepayment station is a reality seems wonderful enough, but that it has been brought about plus every other advantage at once insures for it a ready adoption.

A perusal of the following pages will be interesting, instructive and convincing. An examination of the station will prove every claim we make for it.

GRAY TELEPHONE PAY STATIONS

For Use in Large Cities

THE multi-coin prepayment collector allows for the introduction of pay stations in large cities where heretofore the consideration of time required to operate other types of toll collectors has precluded the installation of such devices.

Adopted by the New York Telephone Company for Use in New York City

AT the present time we are at work in co-operation with the Western Electric Company on an order of twenty-five thousand of these stations for use in New York City, many having already been installed and are giving entire satisfaction, which is the best indication that they do meet the most rigid demands ever imposed on a coin collector.

Exhaustive tests conducted by the American Telephone and Telegraph Company have proven these stations entirely efficient.

GRAY TELEPHONE PAY STATIONS

GRAY TELEPHONE PAY STATIONS

Quick Service

TRAFFIC managers will appreciate the fact that the multi-coin prepay station removes the chance of contesting toll line charges in that it requires the deposit of the proper amount before the line is built up; it also prevents the called subscriber being held at the 'phone, as is the case with the older methods wherein the operator collects the money after the line has been built up and the called party reached.

Operation

THE first coin of any of the denominations for which the Station is arranged, when dropped into the proper slot, will trip a lever, causing the line switch to make contact, which lights the operator's signal lamp and gives the operator control of the coin suspension device through the electro-magnet, and as this magnet is polarized, the operator can deposit or refund at will the coins held in the coin suspension device.

A coin deposited in any slot other than of the denomination for which the slot is marked will automatically return to its patron.

GRAY TELEPHONE PAY STATIONS

Number 50-A MULTI-COIN PREPAY STATION

Detail view, showing construction

GRAY TELEPHONE PAY STATIONS

Description

THE prepay multi-coin station is of plain, simple design. It has deposit slots for nickels, dimes and quarters.

The signals are of the Gray code and are sounded automatically by the coins as they travel the runway which leads to the coin suspension device where all coins are temporarily retained.

The capacity of the coin suspension device is ten nickels, twenty dimes, or ten quarters.

The size of the coin tray is sixty cubic inches.

The money drawer is provided with an alarm switch which is operated by the plunger of the lock in the coin compartment door, and can be wired in the circuit with a local buzzer or bell to detect unauthorized persons attempting to remove the contents of the box.

This station is very attractive in appearance, the surface is highly finished in black japan with all trimmings nickel-plated.

DIMENSIONS: 7 inches wide x 6 inches deep, height 19 inch

GRAY TELEPHONE PAY STATIONS

Number 50-A MULTI-COIN PREPAY STATION

Furnished in solid bronze.

Made especially for Pennsylvania Railroad station, New York City

GRAY TELEPHONE PAY STATIONS

Number 102 UNIVERSAL TYPE PAY STATION

For either post-pay or prepayment service

FOR general pay station purposes this is the acme of perfection. It should appeal strongly to those companies who now operate post-pay but who will eventually change to prepayment service. This station should also find a ready adoption by telephone companies who will operate their Metropolitan exchanges prepay and their smaller exchanges post-payment. The fact that this station is convertible for either use should afford a large saving to operating companies in reserve stock equipment.

This station is the same as the No. 50-A excepting in place of the electrical prepay unit, they are regularly furnished with our coin conductor unit which provides for the operation of the station in post-payment service. (Call Central in the usual way; do not deposit any money until told to do so by operator).

The fact that this station affords for post-pay service all the improvements incorporated in the prepay which were made from a thorough and systematic study and do meet present-day requirements is a factor worthy of consideration.

GRAY TELEPHONE PAY STATIONS

Number 102 Multi-Coin Universal Type Pay Station

For wall mounting. Price, complete as shown,

GRAY TELEPHONE PAY STATIONS

Number 102 Universal Type Pay Station — Continued

IN this station will be found the large money drawer, burglar alarm connection in cash box, the divided housing allowing for inspection and repairs without access to the cash compartment; also the coin return feature wherein money dropped into the wrong slot by mistake will return to the user. All the usual connections and switch-hook are included, this station only requiring the transmitter, receiver and bell box to complete the installation.

Convertible

By changing the units and direction cards in these stations, they can be made to operate on post-pay or prepayment service.

This change can be accomplished by the removal of three screws and requires but a few minutes' time to accomplish.

GRAY TELEPHONE PAY STATIONS

Number 23-D COMPACT TYPE PUBLIC STATION Extra Large Money Compartment

THIS station is very compact and neat in appearance. It includes the complete mountings for the transmitter; also the switch-hook and usual connections. Their installation not only proves a decided advance in appearance over the old method of attaching a station to the telephone which was never designed for such service, but they further afford a substantial saving to the operating company by dispensing entirely with the regular telephone set. All that is required with this station is the usual bell box. The universal mounting plate on these stations allows for either wall or shelf attachment.

The top-box is hinged to the lower part of the housing and when unlocked swings forward, thus allowing for inspection and repairs without unlocking the cash drawer. The inspector and repairmen are confined to the upper compartment while the collector only has access to the cash drawer.

Price

18.00

GRAY TELEPHONE PAY STATIONS

Number 23-C COMPACT HOTEL TYPE

THIS station was designed especially for use in the guests' rooms of hotels.

When so installed it not only performs all the functions of the regular phone as to the usual incoming business, special morning wake-up calls and intercommunicating service, but they further provide for the collection of toll charges through the private branch exchange operator, thus dispensing with writing tickets and the bookkeeping accounts which are necessary with the older methods. Hotels having these stations find they not only save time in presenting the departing guest his bill, but also prevent disputes and ill feeling.

Price

\$18.00

These stations are compact and attractive. They are equipped with complete swivel for mounting the transmitter and include the switch-hook and complete terminal block. The transmitter connections are furnished and are flexible concealed type.

The top-box is hinged to the lower part of the housing and when unlocked swings forward, thus allowing for inspection of the electrical and mechanical parts without opening the cash drawer or disconnecting any of the wiring.

GRAY TELEPHONE PAY STATIONS

Gray Portable Type Pay Stations

IN the supplying of telephone service with coin collectors attached, especially of the portable type, it is of the utmost importance that due consideration be given the fact that the user in holding the telephone receiver has the free use of but one hand to manipulate the coin collector, and to compel the performance of any function other than to deposit the coin in the slot is impracticable. The coin collector not being rigidly mounted, any attempt to compel the working of levers or push slides that might be attached to same would naturally tip over the coin collector, proving not only unsatisfactory to the user, but it would also bring a very high maintenance from the breakage resulting from same.

With Gray Pay Stations, no levers to push or pull, the user simply drops in the coin, making them particularly adapted to portable service.

GRAY TELEPHONE PAY STATIONS

**Much Thought and Study is Given to the Development of
Our Apparatus**

Our Spiral Coin Chute

THE Spiral Coin Chute used in our portable stations prevents the operating of signals with pennies or the shaking out of the money, as they afford a four-way ejector and work automatically no matter what angle the station may be tilted on. They are reliable under every and all conditions

Here we utilize the principle of gravity and centrifugal force

GRAY TELEPHONE PAY STATIONS

The Number 24 Portable Pay Station, Compact Type

Has slots for nickels, dimes and quarters

THIS station is particularly well adapted for private branch exchange service.

It was designed especially for the Wanamaker department store in Philadelphia where two thousand of our stations are now in service. This is the largest installation of its kind in the world. These stations are made of aluminum and are very light in weight. All the contacts, switch-hook and transmitter swivel are mounted on the back-plate and are included with the station. The removable back allows for inspection and repairs without unlocking the cash drawer. The inspector's key opens the back while the collector only controls the money drawer. The locks are entirely different and require special keys. These stations present a very attractive appearance.

Price

18⁰⁰

No. 21 is the same in all respects as our No. 24, but is furnished in iron in place of aluminum.

Price

16⁵⁰

These stations can be had equipped with No. 28-A ringer at an additional cost of \$1.00 each.

GRAY TELEPHONE PAY STATIONS

Number 22 WESTERN MODEL ONE-SLOT PAY STATION

For nickels only

THESE stations are particularly well adapted for private or party line residential service. They mount directly to the back-board and include a complete swivel to mount the transmitter on. The housing is divided into two separate compartments, the upper containing the coin mechanism and usual connections, while the lower protects the cash box.

Inspection and repairs can be made without unlocking the cash drawer or disconnecting any wires. The inspector and repairmen are confined entirely to the upper compartment while the collector has the lower. Each requires a different key.

Number 11 PAY STATION FOR SIDE MOUNTING

Has slots for nickels, dimes and quarters

THIS station is designed to attach to any regular wall type telephone set in present use. They are connected to the telephone by means of a mounting plate, which is included with the station.

Price

Directions for mounting number 11 pay station:

Remove the screw from the lower left-hand corner of transmitter arm. Insert a three-sixteenths inch drill in the screw hole and drill through the back-board. Insert from the front of the telephone set the long machine screw furnished with the pay station, and screw it up firmly into the tapped hole in the mounting plate. This long screw forms a conductor for the signals. From the back of the mounting plate insert flat-head wood screw, using any of the screw holes best adapted for the wall set used. The four washers should be used on the back of the corners of the back-board to level up the telephone.

No. 11-A is the same as No. 11, but has an extra large money drawer.

GRAY PAY STATIONS ON AUTOMATIC SYSTEMS

WE furnish our stations for use on automatic telephone systems. When so installed they require the toll operator's supervision as in manually operated exchanges.

In most cases where our stations are used on automatic systems, they are equipped with manual telephone equipment. Some companies, however, prefer to use the regular automatic telephone sets in order to maintain the identity of their apparatus.

The following automatic companies use Gray Pay Stations:

Auburn, Maine	New Bedford, Mass.
Columbus, Ohio	Portland, Maine
Fall River, Mass.	Portland, Oregon
Grand Rapids, Mich.	Wilmington, Del.
Lewiston, Maine	Westerly, R. I.
Los Angeles, Cal.	

And many smaller companies.

Gray Pay Stations are especially well adapted for use with automatic telephones. The user has simply to drop the coin in the slot. No levers or buttons to operate, thereby eliminating all chance of confusion in the proper manipulation of the regular calling dial.

GRAY TELEPHONE PAY STATIONS

Number One: Plain, one color

Number Two: Composition in black, with bells in blue.

Number Three: Composition in black, with shield in red, white and blue.

DIMENSIONS: Scale $\frac{3}{4}$ Size

CABINET PAY STATIONS

THE cabinet type pay stations illustrated and described in the following pages are especially well adapted for use in depots, hotels, central office buildings and places where a general long distance toll line business is to be had. The fact that our cabinet type pay stations have coin slots from a nickel up to and including the dollar, their installation fully provides for future growth in long distance toll line service collections.

We furnish these cabinets in various woods and finishes to harmonize with the surroundings.

The material, finish and construction are of the best to be had.

The cash compartment in these stations are of semi-steel, lined with cold-rolled sheet steel, affording absolute security. They are equipped with registered pin-tumbler locks with a capacity of 20,000 different changes.

PAY STATIONS FOR FOREIGN COINS

OUR pay stations when arranged to operate with foreign coins are made only to order.

We are prepared to furnish anything in the way of size, form or number of slots required.

Gray Pay Stations are now in use in many of the foreign cities of the world.

Estimates furnished on application

STREET CORNER PAY STATIONS

THE Gray Street Corner Pay Station has proven beyond all doubt both practical and a public necessity. Their installation in public parks, drives and residential districts where there are no stores for the usual location of pay stations have shown by the amount of money they collect that there is a demand for this type of pay station.

Street corners with the pay station installed appeal to many telephone users who object to going to the cafe or cigar store where regular pay stations are often located.

Our street stations are in use in the following cities:

Atlanta, Ga.
Buffalo, N. Y.
Bridgeport, Conn.
Boston, Mass.
Birmingham, Ala.
Cleveland, Ohio
Cincinnati, Ohio
Columbus, Ga.
Dayton, Ohio
Detroit, Mich.
Elmira, N. Y.
Evansville, Ind.
Kansas City, Mo.

Mobile, Ala.
Memphis, Tenn.
Milwaukee, Wis.
Norfolk, Va.
Nashville, Tenn.
New Orleans, La.
Nantucket, Mass.
Ogden, Utah
Pensacola, Fla.
Philadelphia, Pa.
Richmond, Va.
Savannah, Ga.
Utica, N. Y.

GRAY TELEPHONE PAY STATIONS

Number 15 STREET CORNER PAY STATION

Has slots for nickels, dimes and quarters

FURNISHED in finest grade of Scotch iron; finished with weather-proof aluminum paint, making a very attractive and profitable station. They include the compact type of coin collector, together with all the usual telephone parts and connections, requiring only the transmitter and receiver to complete the installation. Post extends into the ground three feet and has openings to take wires from two sides.

Price

Dimensions: Box, 17½ inches high by 14 inches wide by 11 inches deep.

Weight complete: About two hundred pounds.

With the street station, telephone companies derive a revenue from the public which otherwise would be entirely lost.

As an advertising feature, especially where there is telephone competition, the street phone is unsurpassed. They also pay for themselves in a short time.

What other mode of advertising will do as well?

For common battery systems only. Can be had with either bell or shield emblems

GRAY TELEPHONE PAY STATIONS

Number 15 STREET CORNER PAY STATION

These stations should be located convenient to the regular electric light. The directory hangs inside the door. You simply drop in the coin when told by Central.

GRAY TELEPHONE PAY STATIONS

Number 15 STREET CORNER PAY STATION

Has slots for nickels, dimes and quarters

THIS station is the same as the number fifteen, but does not have the post.

They are mounted on the regular telephone pole or building.

Price

Dimensions: Box, 17½ inches high by 14 inches wide by 11 inches deep.

Weight complete: About one hundred pounds.

Public drives having street-corner pay stations have proven very convenient to persons, especially automobilists who have occasion to communicate with home or garage.

In case of fire, especially at night, these stations are of the utmost value. You simply go to the nearest street phone and report to fire headquarters direct. All calls for Fire, Police or Hospital are made free. Think of the possibilities of these phones in saving life and property. They are certainly a public necessity.

For common battery systems only. Can be had with either shield or bell emblems

GRAY TELEPHONE PAY STATIONS

Price of Post

Weight about 110 pounds.

Dimensions: Length 87½ inches, diameter at top 9 inches, diameter at bottom 6 inches.

GRAY TELEPHONE PAY STATIONS

IRON TELEPHONE BOXES AND POSTS

Weatherproof iron posts and boxes
for special telephone service

GRAY TELEPHONE PAY STATIONS

LOCKS

IN ordering our multi-coin pay stations, state what type lock is required. On orders where the lock is not specified, we will furnish the individual type with two keys to each lock.

Sub Treasury Locks

All Alike

These locks are all made on the same change and require but one key. While this method eliminates the collector's carrying a bunch of keys, they do not offer the security to be had with some of our other locks.

Sub Treasury Locks

Individual Type Master Key

These locks are all made to different changes, each lock requiring its own key; in addition a master key can be had which will unlock all. We do not recommend this type lock, as it does not offer the security to be had with some of our other types.

Sub Treasury Locks

Individual Type

These locks each require a different key and this method has been adopted by practically all the large telephone companies. In service the keys are arranged on sealed rings according to each route the collector travels, the collector turning in the keys with the money. We fully recommend this method.

Safe Deposit Locks

This lock requires the insertion of two different keys in order to throw the bolt. It is intended for use where the pay stations are operated on a percentage basis. The number one key is intended to be held by the proprietor, while the number two key is carried by the collector. The proprietor must first insert his number one key, turning as far as possible. Then this key is withdrawn and the collector inserts the number two key which completes the function of operating the lock. This precludes the possibility of the collector opening the cash drawer during the proprietor's absence and saves disputes as to the amount the storekeeper is entitled to.

Combination Locks

This lock cannot be operated without both a special key and the combination upon which each lock is set. Combinations can be changed without removing the lock from the drawer, capacity of different changes being about two thousand. Where this lock is in service, the collector carries but one key and a card showing the combinations which each station is set to.

Pin Tumbler Individual Corrugated Key Locks

These locks are operated by a corrugated key and afford the utmost security. Each lock has its own individual key, and the number of changes that each can be furnished on is unlimited.

Note: In ordering pay stations equipped with safe deposit locks, add 25 cents each to the regular price of the station. For combination or pin-tumbler locks, add 50 cents each.

MEASURED SERVICE REGISTERS

THE theory of supplying telephone service where each subscriber should pay according to the number of calls used is nearly as old as the telephone art itself and has long been agreed upon as the only fair method to both the public and the operating company. The question of a satisfactory and reliable way of keeping track of the calls has been the main factor in restricting the growth of measured service.

The Old Method of Measured Service

The first method brought out to meet this demand was the operator's keeping tally at central office (Peg Count). This was unsatisfactory, especially on party-line service, as it was found that in many cases when the user was asked his number he would give the number of some other subscriber who was on the same wire with the result that charges were often recorded to a subscriber who had not had service for same.

The Fallacy of Central Office Meters

The attempt to supply measured service with the meters at the central office has met with but partial success, as they cannot be operated on party lines, and even with their restriction to private-line service they have not proven satisfactory. The fact that the subscriber cannot inspect his meter leads many to believe they are being overcharged.

GRAY TELEPHONE PAY STATIONS

W. T. Gentry of Atlanta, Georgia, Produces the First Register

Realizing the demand for a device that could be attached to any ordinary telephone which would perform this function, it remained for W. T. Gentry of Atlanta, Georgia, now president of The Southern Bell Telephone & Telegraph Company, to produce a device which would fill this want. In the spring of 1894, nearly twenty years ago, Mr. Gentry brought out the first telephone register, previous to which time nothing in the way of a practical device for such purpose had ever been produced. Completing his work on this register and obtaining United States Letters Patent on same, it was purchased by The Gray Telephone Pay Station Company and was the foundation on which we have successfully built.

The Demand

With Gray Registers a service can be had as with the gas or water meter, requiring no expenditure on the part of the patron, other than for actual service rendered. The users only being required to sign a guarantee to use at least one call per day, or enough to justify the company in making the installation, it being fairly safe to assume that after the subscriber becomes accustomed to the telephone, the transaction becomes a mutual benefit.

GRAY TELEPHONE PAY STATIONS

GRAY TELEPHONE PAY STATIONS

Possibilities with Gray Registers

Gray Registers can be used to regulate the price of service on party lines having more or less subscribers. Thus on a four party line, each registration of the counter could represent five cents, while on lines carrying more subscribers, the contract price could be made in proportion to the service rendered. It will be observed that this plan contemplates the general introduction of the telephone into every home or store where it is difficult to get the parties to sign a regular exchange contract.

The Automatic Signal

The signal in Gray Registers, whereby all vibration on the line is cut out immediately upon the release of the plunger, affords a saving of five seconds on each call.

With Gray Registers, no electrical connection either at subscriber's station or central office are required, they being entirely mechanical in action, and can be used on any ordinary telephone, of either wall or desk type in present use.

Where Gray Registers are attached the user has at all times a record before him which saves disputes and ill feeling.

GRAY TELEPHONE PAY STATIONS

Scale, $\frac{3}{4}$ size.

**This illustration shows our Number 3
Register in detail.**

GRAY TELEPHONE PAY STATIONS

Operation with Gray Registers

When Gray Registers are installed, the operator answers a call in the usual way and upon finding the desired connection can be had, requests the calling party to give the signal before completing the call. The sound of the signal conveyed to the operator denotes that registration has been made in the meter attached to the telephone where the call originated. With Gray Registers in use charges are sure to be made to the party receiving service for same. The operator is relieved of all clerical work, each subscriber automatically performing this function when he sounds the signal.

Gray Registers Regulate the Service

Should the calls from one subscriber run considerably higher than the others on the same party line, the register will indicate that such a subscriber should be put on a private wire, which immediately restores the service to normal condition.

The investment in the registers would be about the only thing that might make any company hesitate at all, and this is indeed small compared to the possibilities of the returns.

Over 100,000 of our registers in actual use is the best proof of their efficiency.

GRAY TELEPHONE PAY STATIONS

Gray Registers Reduce Operator's Load

These registers will reduce the operator's load and improve the service on either private or party lines as they cut out all non-subscribers (dead-head) as well as reducing a large percentage of unnecessary calls.

Comparisons

On the privilege of rental plan when everybody, subscribers and non-subscribers alike, use the service, each telephone on the line is a feeder of traffic to the extent of from ten to twenty calls per day, and as many in addition must be allotted to it because every call originated must be toward some other station in the exchange, unless it be a call for toll line. Suppose you equip such lines with Gray Registers, each user being required to register a certain charge to his account before the operator will make the connections. Now each telephone becomes a governor of traffic and admits only what is to be paid for with no charges if the party cannot be reached.

Why Gray Registers Pay

It will be found on a four party line with Gray Registers attached, each subscriber agreeing to make at least one five-cent local call each day. A line so equipped pays a guarantee of not less than \$73.00 a year on four outgoing calls per day, and with all unnecessary and dead-head calls eliminated. Providing a most satisfactory service for the subscriber with a very profitable investment for the operating company.

TESTIMONIALS

THE real value of a pay station can be ascertained only by an exact knowledge of what it will do through a term of years in actual service. It is obvious that the final test cannot be applied in advance, and therefore the purchaser of the pay station is compelled to make his decision either from a personal examination of it, relying upon his own knowledge of pay station construction or upon the verbal or printed representations of the manufacturer, and as a consequence of this fact it is our purpose in publishing the testimonials shown on the following pages which set forth concisely, clearly and accurately the salient features of the Gray Pay Station and proves all we claim for them.

The element of confidence in the reliability of a pay station must be based very largely upon a knowledge of the integrity and responsibility of its makers.

GENERAL OFFICE
Minnesota Central Telephone Company

TELEPHONE BUILDING
224 SOUTH FIFTH STREET
MINNEAPOLIS, MINN.

May 5th, 1911.

Gray Telephone Pay Station Co.,

Hartford, Conn.

Gentlemen:

In reply to your favor of the 2nd inst., I take much pride in saying that I assisted your Mr. Gray by testing his first model and installed for public use, the first Gray automatic put out by your Company.

At that time I pronounced "The Gray" a success, and having used them continuously since that time, both in Connecticut and Minnesota, I have had no occasion to reverse my opinion. "The Gray" is certainly the most simple and reliable automatic station on the market at the present time, and I would use no other.

Yours very truly,

General Manager,

Minnesota Central Telephone Co.

The Gray Pay Station Co.,

Hartford, Conn.

Gentlemen:

Replying to yours asking our opinion of The Gray Pay Station, beg to state that we value it very highly compared with other sorts we have tried. One feature that is particularly valuable is that it is the same as the Bell use and the public have been trained to use the automatic pay station, and where competition is as sharp as we have, it is important that the public have as little work as possible in using the toll lines. As to the mechanical features of the Gray Pay Station, it seems to be ideal in this respect.

We might elaborate, but think it sufficient to say that we are buying your pay stations exclusively.

Yours truly,

C. W. Enmer
Manager.

GRAY TELEPHONE PAY STATIONS

Office of
Knightstown Telephone Company
George Watts, Manager

Knightstown, Ind., Mar. 18, 1909.

The Gray Telephone Pay Station Co.,
Hartford, Conn.

Gentlemen:

We have tried other pay stations but find none as satisfactory as the Gray.

We find it a hard matter to educate the public to deposit one coin at a time and pull the lever after each coin. With the Gray Automatic this trouble is eliminated and the signals given are as satisfactory to the operator as those given by a lever pay station.

Yours very truly,

KNIGHTSTOWN TELEPHONE CO.

INFORMATION
No. 4

THE GRAY PAY STATION CO.,

Dear Sirs:

We have and note your inquiry of the 9th regarding Gray Pay Stations, and in reply would say that our Company is a firm believer in the liberal use of Pay Stations, installing them in every available place. They are a paying proposition with us.

We are and have been using for a number of years several makes of Pay Stations, quite a number of the same being Gray Pay Stations, in fact the majority of them Gray Pay Stations.

Would say your Pay Stations, to our operators are absolutely accurate. To our customers, very satisfactory on account of their ease in operation, and to our Company, very profitable, in that they have never cost us a cent for maintenance.

Very respectfully yours,

OREGON AND FOREST CITY TELEPHONE CO.,

General Offices:
CARTHAGE, N. Y.

Carthage, N. Y., Feb. 8th, 1909.

The Gray Pay Station Co.,
Hartford Connecticut.

Gentlemen:

Having noted the operation of your automatic coin collecting attachments for the past sixteen years, I am pleased to state that nothing has been brought to my attention during that time, which is so reliable under every condition of service.

You may be interested in the fact that a number of the original styles are still in use and operating in a satisfactory manner.

Simplicity and absence of moving parts seem to insure efficiency and low maintenance expense, which should lead to the selection of "Gray" apparatus.

Yours very truly,

The Northwestern Telephone & Telegraph Co

STROUDSBURG AND BUSHKILL TELEPHONE COMPANY

STROUDSBURG, PA. March 29th, 1909:

The Gray Tel. Pay Station Co.,
Hartford, Conn

Gentlemen:-

Replying to yours of March 3rd, mislaid, would say that we abandoned the type first tried to adopt the Gray Pay Stations largely on the score that much of the revenue at that time would be from "green" users who would be easily discouraged, making the utmost simplicity essential, especially as the simplest type was otherwise equal to any in our judgment.

The results convinced us that not only are the instruments an excellent investment, but an excellent kind and are still our choice of all types in use with about 8 % of all our telephones equipped and the expectation of increasing that percentage.

Respectfully,

STROUDSBURG & BUSHKILL TELEPHONE COMPANY,

CLARENDON TELEPHONE CO

T. L. BENEDICT, MANAGER

CLARENDON, TEXAS., March 30, 1909

The Gray Telephone Pay Station Co.,

Gentlemen:

We take great pleasure in giving our testimonial of the efficiency and satisfactory working of Gray Pay Stations.

It is enough to say that one 5 ¢ Pay Station in a public place cleared us \$15.00 besides the regular telephone rental in one month.

Heretofore, we were compelled at this place to make connections and answer questions from hundreds, who in no way contributed one cent towards the support of our company.

With your Pay Stations, which are always in working order, we save much of the operator's time, and generally pay for the same in one month.

Respectfully yours,

THE CLARENDON TELEPHONE COMPANY,

By T. L. Benedict Mgr.

G. T. SANDS, Vice Pres.
THOMAS BROMLEY, Jr., Sec'y and Treas.

LUDINGTON, MICH. February 22, 1909.

The Gray Tel. Pay-Station Co.,
Hartford, Connecticut.

Gentlemen:

In reply to yours of the 12th to the Lake Shore Telephone Company, our predecessors, will say that we have found Gray Pay Stations very satisfactory indeed, and expect to use them exclusively in the future.

The shield pay station is especially recommended to Independent Telephone people, as it not only serves for the use it is intended, but has a distinctive advertising feature as well.

Yours truly,

THE UNITED HOME TELEPHONE CO.

Thomas Bromley, Jr.
Gen. Manager.

GRAY TELEPHONE PAY STATIONS

Pioneers

IT is with pardonable pride we lay just claim to being the first builders of pay station equipment in the world. Our work has been that of the pioneer. The number of inventions we have taken out indicates that we have kept abreast with the times. All of the patents which we own cover inventions of primary character. One of these patents which has several years yet to run has recently been sustained by a court having final jurisdiction in patent cases as not only being valid, but the judges of this court, Messrs. Grosscup, Baker and Kohlsaat in a strongly written decision declared this patent to cover a pioneer invention. With the many patents we own and control, it is impossible to build a successful pay station without infringing our rights.

The many complicated pay station devices recently put upon the market were but the crudest of imitations which the success of our goods inspired. With the sweeping court decision rendered in our favor, our competitors have recognized the validity of our patents and we have compelled the destroying of thousands of these infringing pay stations. The only pay stations not of our make now lawfully in use are those operating under a special arrangement with suitable license plates attached, such plates being furnished by this Company.

The published letters from the Western Electric Company in behalf of their customers are self-explanatory.

THE GRAY TELEPHONE PAY STATION CASE.

(Gray Patent No. 593,720, Nov. 16, 1897.)

United States Circuit Court of Appeals

FOR THE SEVENTH CIRCUIT.

**THE GRAY TELEPHONE PAY STATION
COMPANY,**

Complainant,

vs.

In Equity.

**THE BAIRD MANUFACTURING
COMPANY,**

Defendant.

**OPINION OF JUDGES GROSSCUP, BAKER AND KOHLSAAT FILED
OCT. 5, 1909, SUSTAINING BROADLY THE GRAY PATENT
AS PIONEER AND BASIC, AND HOLDING IT
VALID AND INFRINGED.**

"Gray was the first to devise and construct a toll-station based upon the idea that the pay-box-signal should be communicated to the transmitter by means of resonant connection between the two. He took steps to secure the utmost freedom of vibration from one to the other. His means of doing so involved a firm or rigid relation of the one to the other—such as would afford the most complete vibratory medium. This would never have been achieved without the idea of vibratory conduction of the sound signal along the solid wood or metal located in the path of vibration between the signal and the transmitter. The accidental vibration growing out of the constructions of the prior art would never have developed reliable vibratory communication. Accuracy of enunciation is the end toward which telephony is striving. Every step in advance is a victory gained over the unknown. * * * * * While the properties of wood and metal as conductors of sound were matters of general knowledge, it cannot be said that the harnessing of this natural principle to the telephonic service was known to be practicable or practical—else why the long continued employment of the clumsy and inconvenient deflectors and signal box openings. We deem invention conclusively established. * * * * * That defendant's pay-station complete, is an infringement of the first patent in suit, we entertain no doubt. All three of the machines shown in the record involve the principles and construction of the Gray patent. Wherein there is any difference, the rule as to equivalents obtains."

(Quoted from the opinion)

CHARLES K. OFFIELD,
OF COUNSEL.

OFFIELD, TOWLE, GRAVES & OFFIELD

Letter for Each Western Electric House to Mail to
Its Associate Company on December 29th, 1910.

Western Electric Company,

463 WEST STREET
NEW YORK.

Dec. 29, 1910.

Gentlemen:

For ourselves, the American Telephone & Telegraph Company and the Associated Companies, we have recognized the validity and scope of the Gray Telephone Pay Station Patent No. 593,720, and have, by the payment of a considerable sum, made settlement for alleged infringing pay stations sold by us to your company.

The principal types of such alleged infringing pay stations which we have sold are the Western Electric No. 13 and the Baird and Livermore boxes.

The Gray Telephone Pay Station Company has agreed to furnish us a suitable license plate, containing sufficient notice to the public that each machine on which it is placed is licensed under this agreement with the Western Electric Company. If, therefore, you will be good enough to let us know the number of these license plates you would like, we shall be glad to furnish them free, so that you may fasten them to the machines now in service.

Yours truly,

WESTERN ELECTRIC COMPANY.

Letter Mailed on January 17th, 1911, by Each
House to all Non-Associate Telephone Companies.

Western Electric Company,

463 WEST STREET
NEW YORK.

Jan. 17. 1911.

Gentlemen:

This company has recognized the validity and scope of the Gray Telephone Pay Station Patent No. 593,720, and has made settlement with the Gray Company for all pay stations of any alleged infringing type which have been sold by us. This includes our own No. 13 collector and the Baird and Livermore machines.

If you have in use any such pay stations which were purchased from us, and will let us know the number of each type, we shall be pleased to send you without charge a sufficient supply of Gray license plates to place thereon. The use of these plates will serve to protect you against any litigation on the part of the patentee.

It is our plan to carry in stock a supply of the more standard types of Gray pay station machines, from which prompt shipments can be made on such orders as you may place in the future. The attached booklet describes the types most generally used.

In accordance with our usual practice of protecting our customers we have paid a considerable sum in effecting the settlement outlined above and we earnestly hope that our action will serve to save you any embarrassment whatsoever.

Yours truly,

WESTERN ELECTRIC COMPANY.

ORDERING PARTS

IMPORTANT NOTICE

ON account of the constant changes in our stations which have been necessitated by our desire to keep ahead of the times, it will be of advantage to our customers requiring repairs or duplicate parts for any of our machines to pay particular attention to details when ordering. It will eliminate a considerable amount of correspondence and will always insure accuracy in filling orders if the broken or worn parts are returned to us with the order. In cases where it is impossible to return the parts, be sure to send a sketch of the parts required with all necessary dimensions.

A strict compliance with the above notice will aid you in receiving your goods promptly and will help us to fill your orders intelligently and accurately.
